LEVERAGEIT™ & MicroGold Form Strategic Alliance

LEVERAGEIT (“LeverageIT”), a provider of software & services to simplify and accelerate the adoption of Microsoft’s .NET technologies, today announced they have entered into a strategic alliance with MicroGold Software Inc. to jointly develop and market an object-oriented development platform designed specifically for rapid migration of applications to .NET.

With this agreement LeverageIT obtains exclusive distribution rights to MicroGold WithClass Enterprise version 9.0. Version 9.0 has numerous features and enhancements including: integrated code management leveraging Visual SlickEdit®, Code Templating, integration with version control software (e.g. Visual Source Safe, PVCS), code auto-complete, custom reverse engineering, a flexible user interface, enhanced database analysis and much more. Version 9.0 will be marketed as an integrated component of Simplex’s Transport Suite.

“We are confident that LeverageIT’s solution-based approach to selling will take our product to new heights”, said Mike Gold, President of MicroGold; “their technical input and integration with the other components of their Transport Suite give professional developers what they need to leverage the power of .NET.”

Transport Suite is a pragmatic, developer-friendly, environment for migrating to .NET with extensive features for reverse engineering and analysis of existing applications and generation of key components of .NET applications directly from UML models.

“MicroGold’s loyal base of customers require technologies that deliver highly architected solutions without losing sight of the needs of the developer”, said Lon Sulgrove CTO of LeverageIT. “By integrating MicroGold products within our Transport Suite we are able to deliver the industry’s first leading-edge platform built for .NET migrations that meets these objectives.”

Transport Suite captures and analyzes applications and constructs both a deep source view and a visual model of their design so development teams can rapidly gain a thorough understanding of relationships, rules and structures, and then leverage them into .NET through auto-generation of the .NET application foundation code.

About LEVERAGEIT – In addition to leveraging Transport to help IT organizations migrate their portfolios of applications to a .NET, LEVERAGEIT combines the expertise of its people and its ServerInsight technology to help IT organizations optimize their use of .NET server platforms. Headquartered in Irvine, California, LEVERAGEIT is the technology company of Nakoma Group.

About MicroGold Software – A software company with over 10 years of experience in creating software design tools continues to strive to give customers the tools they need to help them expedite their IT projects.
